0. Abstract

This paper discusses the access of information by LIS Professionals in IT scenario, the resources of professional information from where they can share their news, views, and ideas, the use of technologies of resource sharing among LIS Professionals so that they can make them capable to manage the knowledge activities and to facilitate better information services to their end users.

1. Introduction

Internet which has revolutionized the information world is the development of the Technology. It is the internet which has made the use of new knowledge more possible globally and fast. Through internet, anybody can access current information from anywhere in just few minutes at minimal cost. The web has become an ideal tool for making information available worldwide. In this article; we have tried our best to give the details of the worthy websites which can be useful for LIS Professionals to make them aware to the latest information.

2. Networking and Resource Sharing

Internet and the Networking among the institutions and organizations of Library and Information Science has given a excellent opportunity of resource sharing benefited to the professionals and users of all field of knowledge. Resource sharing and the networking are the powerful tools for both increasing productivity and availability of the current information to the library professionals. The job of the library networks is to create mechanisms that facilitate the sharing of resources available in the participating libraries of a network. No library in this world can acquire all the latest publications or able to store all the old information with them so resource sharing helps the libraries and the professionals to keep them update with the latest developments in the field of knowledge.

3. Resources available on the internet

Following websites and links are found suitable for the recent advancement in library science profession. Here we have included consortium, digital archives, LIS jobs, services and functions of library, national and international organizations , online reading materials, LIS management, LIS Education, library networks etc.

3.1 Consortium

Participating Consortia of the ICOLC <http://www.library.yale.edu/>

This lists consortia that participate on the ICOLC consortia listserv. If the consortium has completed a descriptive profile, the name highlighted in grey will link to it. The profile contains general background about the consortium's size, composition, activities, web sites, and people to contact for further information.

3.2 Automation and Digital Archives Softwares

- **E-Journal Archives Feasibility Study**

<http://www.diglib.org/> it is funded by the Andrew W. Mellon Foundation. The study utilized the content from ten publishers, including commercial publishers Blackwell Science, Elsevier Science, Nature, and John Wiley & Sons, to determine the feasibility of creating a common structure capable of successfully archiving significant digital content.

- **The Digital Object Identifier (DOI)**

<http://www.doi.org/>

DOI is a system for identifying and exchanging intellectual property in the digital environment. The DOI System provides a framework for managing intellectual content, for linking customers with content suppliers, for facilitating electronic commerce, and enabling automated copyright management for all types of media. The system is managed and directed by the International DOI Foundation. Several million DOIs have been assigned by DOI Registration Agencies in the US , Australasia , and Europe .

- **Eprints**

<http://www.eprints.org/>

Eprints, open Archives Initiative (OAI)-compliant software for eprint archiving, released by Southampton University. EPrints.org maintains an open-source software package (GNU Eprints) that makes it easy for anyone to set up and run an institutional "E-print archive". The term 'E-print' covers both preprints, and also post-prints, electronic copies of articles that have already been accepted and published in an existing journal.

- **Open Journal System (OJS)**

<http://pkp.sfu.ca/> OJS was released by the Public Knowledge Project . It assists with every stage of the refereed publishing process, from submissions through to online publication and indexing. OJS is open source software made freely available to journals worldwide for the purpose of making open access publishing a viable option for more journals, as open access can increase a journal's readership as well as its contribution to the public good on a global scale.

- **FEDORA (Flexible Extensible Digital Object and Repository Architecture)**

<http://www.fedora.info/>

Fedora is an open source digital repository service that gives organizations the tools for managing the existing and emerging content management requirements. At its core is a powerful digital object model that supports multiple representations or views of each digital object.

- **HighWirePress**

<http://highwire.stanford.edu/> HighWire Press is a division of the Stanford University Libraries, which produces the online versions of high-impact, peer-reviewed journals and other scholarly content. HighWire Press hosts over 15 million articles from over 4,500 PubMed journals, including free, full-text articles from 868 journals (as of August 13, 2005).

- **Open Archives Initiative**

<http://www.openarchives.org/> The Open Archives Initiative develops and promotes interoperability standards that aim to facilitate the efficient dissemination of content. The Open Archives Initiative is currently an organization and an effort explicitly in transition, and is committed to exploring and enabling this new and broader range of applications.

- **LOCKSS**

<http://lockss.stanford.edu>

LOCKSS is open source, peer-to-peer software that functions as a persistent access preservation system. Information is delivered via the web, and stored using a sophisticated but easy to use caching system. LOCKSS model capitalizes on the traditional roles of libraries and publishers. LOCKSS creates low-cost, persistent digital "caches" of authoritative versions of http-delivered content. The LOCKSS software enables institutions to locally collect; store, preserve, and archive authorized content thus safeguarding their community's access to that content. The LOCKSS model enforces the publisher's access control systems and, for many publishers, does no harm to their business models.

- **DSpace**

<http://www.dspace.org/>

DSpace is a groundbreaking digital library system to capture, store, index, preserve, and redistribute the intellectual output of a university's research faculty in digital formats. Developed jointly by MIT Libraries and Hewlett-Packard (HP), DSpace is now freely available to research institutions world-wide as an open source system that can be customized and extended.

- **Open Repository**

<http://www.openrepository.com/>

Open Repository is a service provided by BioMed Central for institutions and research organizations. Open repository offers professional help to institutions to quickly and easily build, launch, maintain, and populate their own repositories. The service has been designed to be flexible and cost-effective. BioMed Central's economy of scale makes it possible for institutions that could not otherwise afford to, or lack the infrastructure or technical capacity in-house, to set up repositories.

- **Apache Open Source Software**

<http://www.apache.org> (Apache Software Foundation). The best known product is the Apache HTTP Server Project.

- **Berkeley Digital Library SunSITE**

<http://bcdlib.tc.ca/general-collections-us.html#BerkeleySunSite> (University of California, Berkeley) provides access to software tools and support information for building digital libraries. Bibliographic Protocol (BibP) Client-Server Software see USIN.org.

- **CommPort**

<http://www.tc.ca/commport/> (Community Portal Generator; Telecommunities Canada) was developed as open source software for the creation of customizable community information portal systems. Version 1.0 was released on June 16, 2000.

- **Dienst**

<http://www.cs.cornell.edu/cdlrg/dienst/DienstOverview.htm> (Cornell Digital Library Research Group).

- **dLibra Digital Library Framework**

<http://dlibra.psnc.pl/pl/> (Poznan Supercomputing and Networking Center, Poznan,

- **eFirstXML**

<http://www.openly.com/efirst/> (Vendor: Openly Informatics, Inc.). Designed for the publication of scholarly and scientific journals on the Web, several components of this software are available. Date added: 2001-12.22.

- **Greenstone Digital Library Software**

<http://www.greenstone.org/english/home.html> (New Zealand Digital Library Project, University of Waikato). Open Source software for organizing digital collections and making them accessible via the Internet/Web or on CD-ROMs. NZDL will also convert small digital collections using Greenstone Software. Other software is also available for download. Alternate download site: <http://sourceforge.net/projects/greenstone> .

- **[Koha Open Source Library System](#)**

<http://www.koha.org/> (Horowhenua Library Trust and Katipo Communications Ltd, New Zealand) is an open source, free integrated library management system available (as of May 2001) only on the Linux platform. The system is designed to work with the Apache Web server and mySQL.

- **MDID**

<http://mdid.org/> (Madison Digital Image Database), developed by James Madison University, this product was designed for "managing digital image collections and tools for integrating digital images into the teaching and learning process." Version 2 was released on July 30, 2004. An online demo is available. System requirements: "MDID 2 is an ASP.NET web application using IIS on Windows 2000 or 2003 Server. Supported databases are MySQL 4 and Microsoft SQL Server 2000." Date accessed: 2004-08-06. Date added: 2004-08-06.

- **Metadata Engine Project**

<http://meta-e.uibk.ac.at/> (METAe). Co-ordinated by the University of Innsbruck, Austria. Multinational European and United States research project (2000-2003) to produce open-source software for producing and managing metadata (descriptive information) and the text itself from digital facsimiles. Date updated: 2002-09-08.

- **mySQL**

<http://www.mysql.com/> (MySQL AB) is a popular relational database management system which operates on several operating system platforms, including Windows and Linux, and which utilizes the Structured Query Language (SQL).

- **OSS4LIB**

<http://www.oss4lib.org/> (Open Source Systems for Libraries; hosted by SourceForge.net), established by Dan Chudnov in 1999, maintains a listing of free software and systems designed for libraries.

- **Perl**

<http://www.perl.com> /is a server-side, cross-platform scripting/programming language. A Perl database interface for mySQL databases is available.

- **PHP**

<http://www.php.net/> (The PHP Group) is a server-side, cross-platform scripting/programming language which includes functions for handling MySQL databases and integration with the Apache Web server.

- **phpLinks**

<http://www.phplinks.org> is an open source, free PHP script for creating a Yahoo!-like directory with a site-search engine. phpLinks requires, as a minimum, MySQL and PHP4, both of which are also free. The Apache Web server, also free, can be used to test the functionality on a local (PC) Web host before going live.

- **PostgreSQL**

<http://www.postgresql.org/> is another popular relational database management system that operates on several operating systems, including Windows and Linux, and which utilizes the Structured Query Language (SQL). Date accessed: 2005-05-23. Date added: 2005-05-23.

- **ROADS Software**

<http://www.roads.lut.ac.uk/> was "originally developed as part of the UK Electronic Libraries Programme (eLib)". The software requires the Perl scripting/programming language and is used to create Yahoo!-like directories.

- **Zope,**

<http://www.zope.org/> originally created in 1996 by Digital Creations, Inc., is an open source, cross-platform Web application server with an integrated transactional object database. Zope can also be integrated with Microsoft Office 2000, the Apache Web server, and includes support for accessing external databases such as MySQL.

Scottish Confederation of University and Research
Libraries

Special Library Association (SLA)

4. Conclusion

We have tried our best and succeeded in our mission for providing the links of Library and Information Science websites, the web addresses provided above are all live and tested by us, a few may be found floated. We are sure that these will be very useful for the LIS Professionals and will help them as a ready reference resource.
